Summary

Highly motivated and results-oriented Senior DevOps Engineer with 4+ years of experience in automating deployment processes, optimizing infrastructure management, and championing a DevOps culture. Proven expertise in CI/CD pipelines using GitLab CI/CD, coupled with strong experience in GCP and GCP Associate Cloud Engineer certified. Proficient in scripting languages including Python and Bash, and adept at implementing infrastructure-as-code solutions using Terraform and Terragrunt.

Skills

- GitLab CI/CD
- Google Cloud Platform (GCP)
- Python, Bash, PowerShell
- Linux, Docker, Database Administration
- Git
- Terraform, Terragrunt, OpenTofu
- TypeScript, Node, JavaScript

Work History

Senior DevOps Engineer, 09/2022 to Current

Vivid Cloud – Brunswick, ME

- Reduced Cloud Run costs by 73% by adjusting CPU boost and pre-allocation settings
- Automated application deployment with introduction of CI/CD pipelines for multiple projects
- Implemented multi-project pipeline builds to trigger sequential deployment for tightly-coupled applications
- Refactored pipelines to parallel-matrix deployments jobs to improve build and deployment times.
- Championed a DevOps culture within the organization that emphasized collaboration between development, operations, and QA teams for seamless software delivery.
- Mentored junior team members, fostering professional growth and improving overall team performance.
- Increased system reliability, minimizing downtime and service disruptions through proactive troubleshooting and root cause analysis.
- Implemented scheduled pipelines for building common Docker images, automating repetitive tasks and ensuring consistency.

- Established developer GitLab Review Apps, facilitating easy review and testing of changes on each MR.
- Streamlined infrastructure management through automation using Terraform, Terragrunt, and OpenTofu.

Software Engineer, 04/2021 to 09/2022

TYLER TECHNOLOGIES – Yarmouth, ME

- Built internal tool using PowerShell to automate release and updating of TypeDoc comments into Gatsby Documentation Website, reducing manual documentation
- Built cloud administration application providing clients access to integrate and map required data from external services in centralized location, reducing support calls
- Spearheaded move from Bitbucket and TeamCity to GitHub to support CI/CD, including branch protection safeguards requiring team member code reviews and secret checks on 100% of commits
- Worked with product managers to architect and develop single-page web app for client database migration into cloud application.

DevOps Engineer, 04/2019 to 04/2021

TYLER TECHNOLOGIES – Yarmouth, ME

- Reduced user creation and administration tasks by 30 minutes per user by automating user creation process for new engineers
- Developed infrastructure using Puppet Enterprise architecture as code for department goal to reduce configuration drift and ensure consistency and reliability across all developer environments
- Managed existing on-premises environments, automation, update requirements, disaster recovery/backups, and capacity planning
- Ensured project documentation was created and updated, including design, development, and deployment documentation
- Developed automated server creation with Cloud-Config and vRealize tools to ensure developers of fast, consistent, reproducible environments reducing manual operations intervention
- Ensured scheduled static code analysis security scanning and reporting for Tyler-developed software, providing automated code vulnerability reports to development teams.

Conversions Engineer, 06/2017 to 04/2019

TYLER TECHNOLOGIES – Yarmouth, ME

- Designed COBOL programs converting data from old client systems to Tyler software schema requirements in relational databases (MS SQL)
- Streamlined build and compiling process by building internal CLI tool to automate manual tasks
- Built internal CLI tool to automate creation of error logs and build, compile and output data into correct files and formats, drastically decreasing documentation needs, manual tasks, and

conversion times; saving each engineer 5 hours per week.

- Executed and developed SQL scripts for additional data conversions and data updates.
- Optimized engineering processes by implementing innovative solutions and streamlining workflow.
- Improved team productivity by providing technical guidance and mentoring junior engineers.

Pharmacy Systems Specialist, 02/2016 to 06/2017

MAINE MEDICAL CENTER – Portland, ME

- Responded to all phone messages, paging system messages and emails within 2 hours, prioritizing urgent needs, and communicating plans with all customers within 24 hours
- Improved technology performance by strengthening relationships with vendors to ensure optimal usage of all solutions and collaborating with vendors as needed for installations and upgrades
- Excelled at creating wide array of pharmacy medical reports and forms using Python and SQL
- Developed downtime procedures, FAQs, and knowledge-based documentation.

Education

Associate of Science: Computer Science

Southern Maine Community College - South Portland

Certifications

Google Cloud Platform Associate Cloud Engineer
